What skills have you gained through your apprenticeship?

At work, I've primarily focused on web development, gaining skills and experience in HTML, CSS, JavaScript, web security, and accessibility. At university, we've covered a range of topics, from computational thinking and programming fundamentals to data management and compilers. I'm excited to see what's next in the new semester, which starts in a few weeks.

How has the apprenticeship impacted your life?

The apprenticeship has had a massive positive impact on my life. I previously spent almost a decade in retail—a job I didn't particularly enjoy—so switching to something I'm passionate about has been a huge boost to my quality of life and mental health.

What would your advice be to someone who is thinking of doing an apprenticeship?

For anyone considering an apprenticeship, I'd say if it's something you think you'll enjoy, just go for it! It could end up being one of the best decisions of your life—just like it was for me.

"I am enjoying every part of the apprenticeship, it has been life changing for me".
